

DEPLOYMENT PREPARATION AND STAGING ENVIRONMENT SETUP

On Day 6 of the hackathon project, I successfully deployed my website on Vercel. Initially, the deployment process encountered an error due to missing environment variables. After identifying the issue, I resolved it by correctly setting up the required environment variables in the Vercel dashboard.

Here is the deployment link to the website:

<https://hackathon-e-commerce-website-omega.vercel.app/>

here is performance report
